

AD PROVISIONING POLICIES

To do Provisioning to Active Directory we need to create a provisioning policy. For that we need to go Provisioning Policies in Configuration.

Add a section name it as Create.

Add fields like SAMAaccountname,distinguishedName,employeeID,sn,givenName.
Edit the fields by giving name,display name,set the value settings as given below.

The screenshot shows the 'AD-Create' form configuration in SailPoint IdentityIQ. The left pane lists fields: SAMAaccountname, distinguishedName, employeeID, sn, and givenName. The right pane shows the configuration for 'distinguishedName'.

Field	Type Settings	Value Settings	Dynamic	Value	Allowed Values	Validation
SAMAaccountname						
distinguishedName	Script	Dynamic	<input checked="" type="checkbox"/>	return identity.getName();	None	None
employeeID						
sn						
givenName						

distinguishedName:

value:script

return

"CN="+identity.getName()+", "+ "OU=People,OU=Demo,DC=Eshiam,DC=com";

employeeid:

value:script

return identity.getAttribute("employeeID");

sn:

value:script

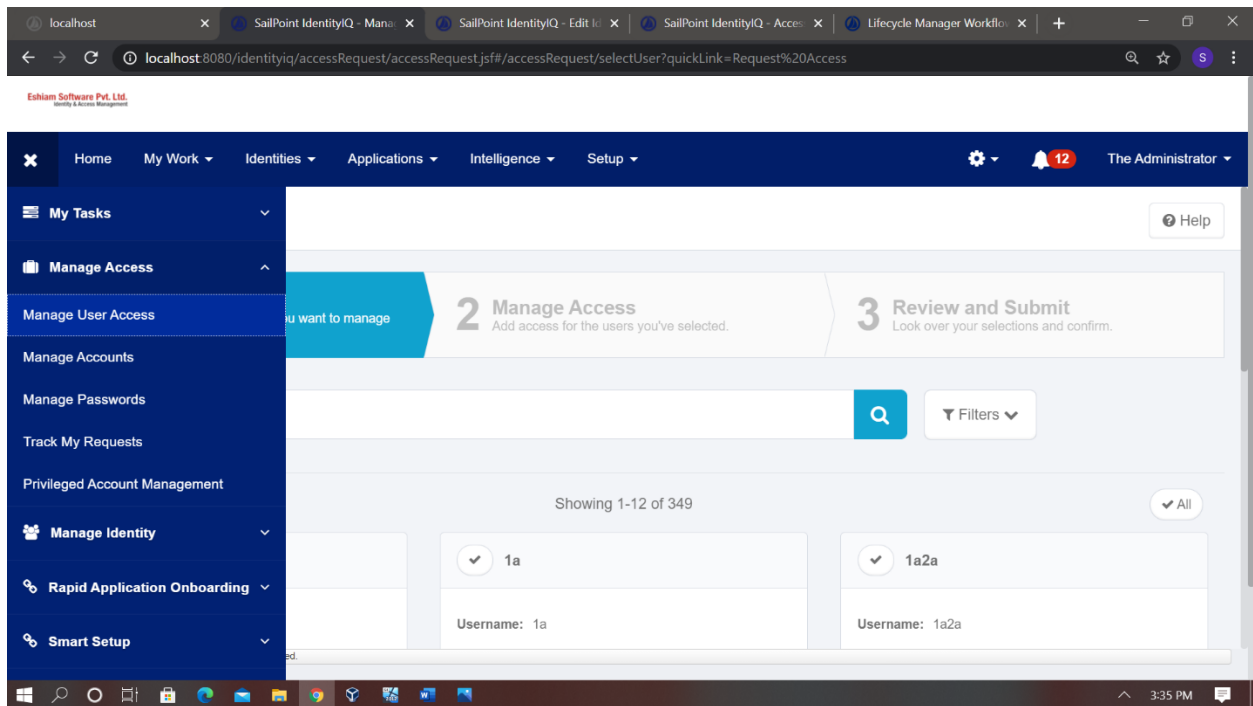

return identity.getLastname();

givenName:

value:script

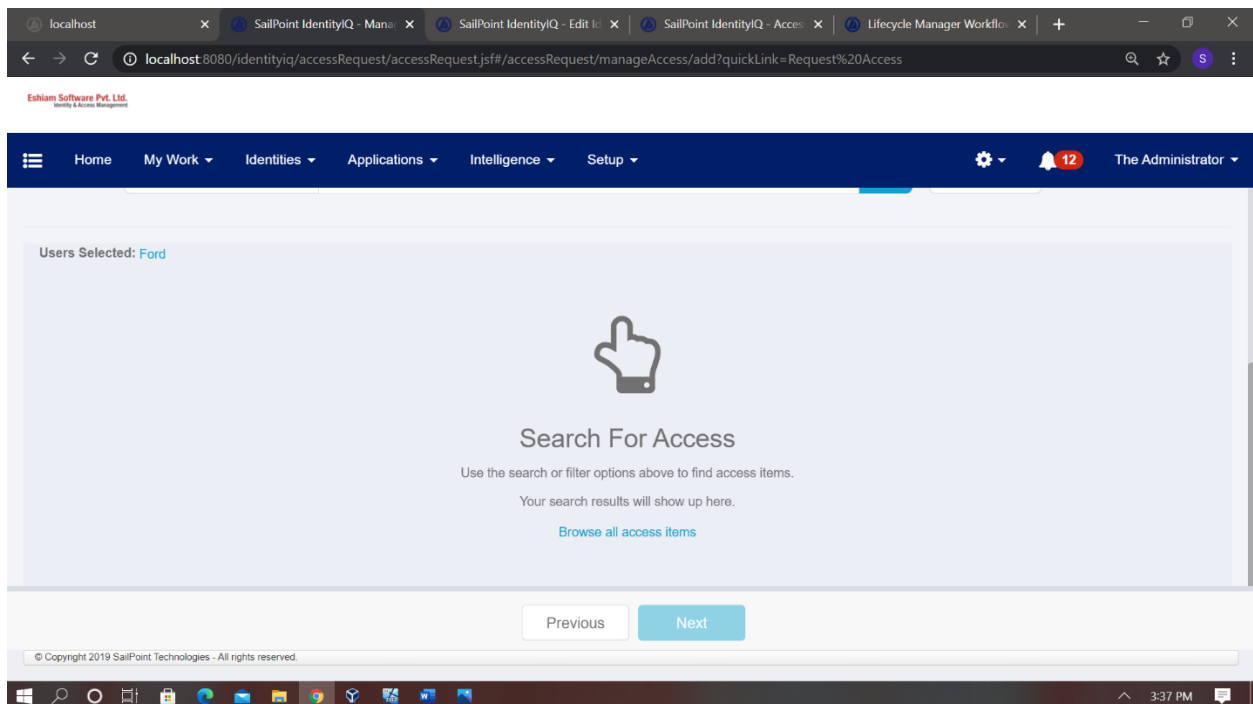

```
return identity.getFirstname();
```

SAVE the form.

Then go to Manage Access→Manage User Access.

Select a user.

Click on Browse all access Items.

Then you will get all the groups. Then you select a group. Then next→submit.

Then the identity will be added to the group.
